

# Guest Wifi - Connecting to NC-Conference

**Private Mac address needs to be turned off for this Guest network or you will be continuously required to register your device. Please follow step-by step guidance.**

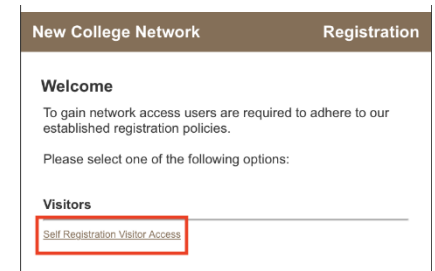

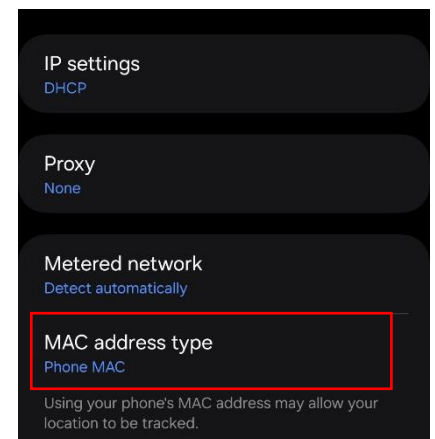

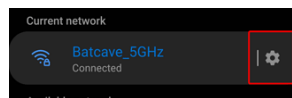

## iPhone

1. Connect your phone to the **NC-Conference** SSID
2. Enter the password **Penny-Housing-Sheep**
3. Now turn off Private Address:
  - Settings > Wi-Fi > Select **NC-Conference**
  - Press the information icon ⓘ
  - Locate and turn off **Use private address/set to OFF**
4. To register your device – open a web browser click the Self Registration link  
If the registration page does not load, please enter the URL/site address **example.com**
5. When prompted enter your name and email address, wait for the confirmation screen, your device is now connected.

## Android Phones

1. Connect your phone to the **NC-Conference** SSID
2. Enter the password **Penny-Housing-Sheep**
3. To turn off Private Address
  - Wi-Fi > Select **NC-Conference**
  - Press the **settings** icon
  - Press **View More**
  - Locate **Mac address type** and changed to **Phone MAC**
4. To register your device – open a web browser – click Self Registration link  
If the registration page does not load please enter the URL/site address “example.com”.
5. When prompted enter your name and email address, wait for the confirmation screen, your device is now connected.

## Apple MACOS 15+

Choose Apple menu > System Settings, then click Wi-Fi in the sidebar.

1. Click the Details button or More Info button next to the network name.
2. From the menu next to Private Wi-Fi Address, set to OFF
